

What Users Say About VersaCAD

Roy Holder, Auto-Systems and Services, North Carolina. We truly appreciate the service that you have given us over the years. I have never expected to get the kind of service from any software company that we have received from your folks,

David Cook, Tryco Machine Works, TX: My bottom line...get a drawing done and get it in someone's hands so they can make it. Don't need fluff. VersaCAD is the program for me. Appreciate your updating it.

Jim Rodriguez, James T. Rodriguez Architect, TX: We've been using VersaCAD for a very long time; i.e., since the 80's. My company is presently me and 2 others; i.e., total of 3. At present, we have one CAD Station. I'm thinking of adding one more CAD Station plus it would be good if the 2 design types (I'm one of those) had the software available at their desks, instead of looking at print outs. So, for a company of 3 (and possibly 4 in the near future) what would a "corporate license" run? Answer: \$1000

Robert Delisle, Montreal Canada: It's a great news and I am very happy. I am very interested of purchasing the new version. I am owner of VersaCAD 2006 for Windows and I think the upgrade will cost 395\$. I am retired of the city of Montreal in Canada since 3 years. It's a great pleasure to use this software for my own purpose

David Cosgrove, Manual Technologies : [Congratulations on the release!](#)

Gayle Berkey, Gayle Berkey Architects... All of my employees were AutoCAD trained. They wanted to switch to VersaCAD after they realized how much easier it was. We are very pleased with the new efficiency. No one wants to use AutoCAD anymore. I'm amazed how many architects think we use VersaCAD merely because it's cheaper! If they only knew."

Tim Barnett, Barnett Offshore Design, Ltd "I have been a loyal and very satisfied VersaCAD user since 1994. VersaCAD is the only software that I could come close to saying is perfect. I have not had a single problem. Most of all it is designed for logical thinking people and has none of the nerd baggage that so much software has."
